Allowable Subject Matter

1. Claims 1-16 are allowed.
2. The following is an examiner's statement of reasons for allowance: Regarding claims 1-16, the prior art of record fails to teach of a single user detection device for determining a column of a channel correlation matrix using the estimated channel response, and for determining a spread data vector using the determined column, the estimated channel response, the received combined signal and a Fourier transform; and where the data of the data signals is estimated from the spread data vector. The closest reference, Davis (U.S. Patent No. 5,377,225), teaches of an antenna, a data generator, a sampling device and a spreading and modulation device, but fails to teach of a single user detection device for determining a column of a channel correlation matrix using the estimated channel response, and for determining a spread data vector using the determined column, the estimated channel response, the received combined signal and a Fourier transform; and where the data of the data signals is estimated from the spread data vector.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
